Career Objective

Artificial Intelligence & Machine Learning student with practical experience in YOLOv8, Python, OpenCV, and Streamlit, working on real-world projects in computer vision and intelligent data systems. Actively seeking opportunities to apply and expand technical skills in an industry-driven environment.

Internships

Recodist Intern, Josh Talks: Recorded and documented on-ground moments for digital storytelling. **May 2025 - Aug 2025**

Coder Intern, CodSoft : Worked on programming tasks and problem-solving assignments. **Sep 2025 – Oct 2025**

Machine Learning Intern, Prodigy: Assisted in building and testing machine learning models. **Oct 2025 – Nov 2025**

Education

Noida Institute of Engineering & Technology **2023 – Present**
B.Tech in Artificial Intelligence & Machine Learning *CGPA: 8.2*
S K D Public School (*Senior Secondary (CBSE)* **2022**
P S Academy (*Secondary (CBSE))* **2020**

Projects

Research Project (Ongoing):Drone-Based Detection of Floating Marine Debris Using YOLOv8 | **2025**
- Python, YOLOv8, OpenCV, Streamlit, Computer Vision.
  Designed an offline drone-based YOLOv8 solution for accurate, real-time detection of floating marine debris.

Agentic AI for Global Healthcare Data Trust | *Python, Pandas, API, Streamlit LLM-based enrichment* **2025**
- AI system that validates, enriches, and risk-scores healthcare provider data, transforming raw records into a trusted, analytics-ready directory with minimal manual effort.

Mental Health Detection Using Machine Learning | *Python, Machine Learning, Streamlit* **2025**
- Implemented a machine learning model to assist in early-stage mental health condition detection using clinical datasets.

Food Wastage Reduction Web Application | *Python, HTML, CSS, JavaScript, and MySQL* **2024**
- Built an **AI-powered web app** to reduce food wastage through data analytics and anomaly detection.

AI-Based Train Collision Avoidance System | *Python, HTML, CSS, JavaScript, and MySQL* **2025**
- Built an AI-powered train collision avoidance system using real-time sensor data and machine learning.

Certifications

Building Machine Learning Systems with TensorFlow – Infosys Springboard **2025**
Deep Learning for Developers – Infosys Springboard **2025**
Digital Marketing – Google Garage **2024**

Skills

Programming: Python, Java, DBMS, Full Stack, Data Structures & Algorithms
AI / ML: Machine Learning, Deep Learning, CNN, Computer Vision, NLP
Libraries & Tools: NumPy, Pandas, Matplotlib, OpenCV, TensorFlow, Jupyter Notebook
Databases & Platforms: PostgreSQL,MySQL, Mango DB
Interpersonal: Leadership, Management, Public Speaking, Team Coordination, Critical Thinking, Creative Problem-Solving

Co-Curricular Activities

Google Hackspace Hackathon 2025 – Grand Finale
- Reached national finals with the project **AI-Based Train Collision Avoidance System**.

EY Techathon 6.0 – Semi-Finalist (Ongoing)
- Developing **Synexis**, an agentic AI system for healthcare provider data validation and trust scoring.

Management Head – Machine Magnet Club, NIET
- Head of Management, overseeing planning, operations, and team coordination for club activities.

Languages

1. **English** 2. **Hindi** 3. **Japanese**

Extra-Curricular Activities

State Level Badminton
- Demonstrates consistency, perseverance, and long-term commitment to structured training.

Moon Olympics – Runner-Up
- Achieved runner-up positions, reflecting strong mental calculation ability and analytical thinking.

Social Media Handling (Ongoing)
- Social Media Handler, driving online presence and engagement through consistent content management.
